

**Working Safely and Effectively**

***STIHL***®

## Safety first when mowing - the STIHL Safety concept

■ Accidents can always happen whenever people work with machines. That is why STIHL has developed a comprehensive safety concept for brushcutter operators. This concept includes all-round safety features on the STIHL machines, appropriate protective clothing and safety accessories. Used in combination, these components provide the operator with optimum protection. The most important points to be noted in this context have been summarised here, together with a few "Golden safety rules":

## Safety first when mowing - the STIHL Safety concept

- Always keep a safe distance of at least 15 metres from any bystanders when mowing grass.  
The machine, cutting tool and protective features should be inspected regularly to prevent malfunctions.  
Personal protective equipment should also be checked before starting work to ensure that it is complete and fits correctly.  
Watch the cutting tool at all times when mowing in order to remain aware of the 'ground conditions' and avoid unpleasant surprises.

## **STIHL protective clothing - Comfortable to wear, for optimum protection**

- Safety is an important matter for STIHL. That is why STIHL power tools include comprehensive safety features.

However, it is only the combination of technical safety and personal protective equipment that ensures optimum protection when working with power tools. Further information on our personal protective equipment can be obtained from ALLCUT POWER PRODUCTS.
